	An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.	CVNG 4500 Capstone Design I (D) CVNG 4510 Capstone Design II (R)	CVNG 4500 – Assignment on Design Criteria CVNG 4510 – Assignment on pursuit of external resources not typically taught in classes	Same as above
	An ability to design a system, component, or process in more than one civil engineering context (e.g. construction, environmental, geotechnical, structural, transportation, water resources).	CVNG 3110 Transportation Engineering (I/D) CVNG 3130 Hydraulic Engineering (I/D) CVNG 3150 Intro to Structural Design (I/D) CVNG 4510 Capstone Design I (A)	CVNG 3110 – Combined homework on pavement design and long-range transportation planning CVNG 3130 - Exam questions focused on culvert design CVNG 3150 - Exam questions focused on design of steel beams and columns CVNG 4510 – Capstone Final Design	Same as above
	An ability to explain basic concepts in management, business, public policy, and leadership.	CVNG 3040 Sustainability and Env. Eng. (I) CVNG 3070 Project Management (I/D)		

1. How and when will analyzed data be used by program

2. How and when will the program faculty evaluate the impact of assessment-informed changes made in previous years?

The continuous improvement approach will maintain a review cycle involving a long-term feedback loop occurring every three years, while other assessment, such as outcome achievement, will be evaluated on a one-year cycle. Thus, data for changes made to the curriculum will include three-year data sets each review cycle moving forward. Fig. 1(a) shows the general review cycle for student outcomes and Fig. 1(b) shows a linear representation from the assessment at the course level, through the independent faculty review of a student outcome as a whole, concluding with the plan of action implementation.

Dr. Carroll presented a sample of the CATME results from CVNG 3020 along with a draft rubric for teamwork loosely based on the AAC&U teamwork value rubric. The CATME results include scores in five different categories for each individual student along with peer comments.

- Two representative binders for Outcome 1 and Outcome 5 were presented to the Civil Engineering Program faculty. All student work used for assessment along with the actual assessment will be placed in each respective binder. The binder for each outcome will include a tab for each course from which the assessment was taken along with divisions for each academic year that materials were recorded and assessed. The outcome binders will be housed in the Civil Engineering Adjunct Office.
- The Civil Engineering Program faculty agreed to develop the rubrics for the assignments selected for assessment in their respective courses. The rubric development tasks are listed in Table 1. Dr. Luna volunteered to develop the General Written Communication rubric and Dr. Carroll volunteered to develop the Oral Communication rubric, both of which will be developed based on the corresponding AAC&U value rubrics. While those rubrics will be developed in their general form, they may need further modifications to align with a specific assignments in a specific course. Each capstone design advisor will complete the written communication rubric for their respective group and all faculty attending the Capstone presentations will complete the oral communication rubric for every group.
